(54) An implantable cardiac stimulation device

(57) A system and method for discriminating a fusion beat from an evoked response during the autocapture/autothreshold routines of an implantable stimulation device is provided. The presently disclosed system and method reliably verifies capture in an implantable stimulation device by accurately discriminating a fusion beat from an evoked response based on an analysis and comparison of the morphology, amplitude, polarity, pat-

tern and/or timing intervals of resulting T-waves. The disclosed system for discriminating a fusion beat includes a pulse generator; a means for sensing voltage signals evidencing depolarization and repolarization of cardiac tissue; and a microprocessor based means for determining, based on an analysis of the subsequent T-waves, whether a voltage signal that occurs during the capture detection window is a depolarization voltage signal, which evidences capture, or a fusion beat.

INCOMPLETE SEARCH The Search Division considers that the present application, or one or more of its claims, does/do not comply with the EPC to such an extent that a meaningful search into the state of the art cannot be carried out, or can only be carried out partially, for these claims. Claims searched completely: 1-6 Claims searched incompletely: Claims not searched: 7-9 Reason for the limitation of the search: Article 52 (4) EPC - Method for treatment of the human or animal body by therapy
